**ROCKLIFFE<sup>®</sup> ANNOUNCES IMMEDIATE AVAILABILITY OF  
MAILSITE EXPRESS WITH END USER LANGUAGE  
CUSTOMIZATION CAPABILITIES**

**MailSite Express now supports over seventeen languages and becomes  
the easiest to use for hosting international e-mail**

San Jose, Ca, October 10, 2000 --- Rockliffe Inc., a leading developer of scalable messaging infrastructure software for Windows NT/2000, today announced the immediate availability of MailSite Express that now includes the most comprehensive implementation of international language support.

"Individual users of a single MailSite Express system can now select their own language," said Rockliffe president John Davies. "This means that our customers can host e-mail for users around the world with ease."

"It's fast, very easy to setup, supports a variety of languages, and is well designed," said Fabian Lucchi of Informaniak Network SA. "We used another webmail product before MailSite Express and were disappointed. MailSite Express is so much faster and uses IMAP4 (very uncommon - almost all other competitive products use POP3). It offers great integration with other e-mail clients like Outlook. Our users can organize their mail in folders and the view is the same from Outlook or MailSite Express – even for the address book," continued, Mr. Lucchi. "We're using it to serve approximately 20,000 mailboxes and are perfectly happy with it."

This new version of MailSite is designed specifically to meet the growing needs of global service providers including ASP's, wireless carriers and unified messaging providers. Additional language support now includes Dutch, Japanese, Norwegian, Korean,

Russian, and Swedish. Administrators can add and modify language translations with ease.

This new user-level language capability makes it easier for administrators to brand MailSite Express to fit in with the rest of their website. Now, administrators can brand a single installation of MailSite Express and all users on that installation can select their own language.

MailSite Express is fully integrated with the rest of Rockliffe's family of MailSite products including MailSite DataCenter, a carrier-grade e-mail solution designed to scale effortlessly from hundreds of thousands to millions of users per cluster, and MailSite Pocket, a wireless e-mail client. MailSite Express with new language support adds to Rockliffe's reputation as the leading provider of Windows-based Internet messaging solutions.

From the company's inception, Rockliffe has been committed to leading the market in Internet messaging infrastructure software designed specifically for Windows NT/2000. Rockliffe's flagship product, MailSite, is designed to be easy to administer and can quickly accommodate additional users with minimal investment in hardware, software, personnel and premises. Rockliffe MailSite's unique scalability provides an affordable long-term e-mail solution for companies and organizations of all shapes and sizes, from the smallest partnership to the largest service provider. MailSite Express web e-mail is now available in seventeen languages, including Japanese, Chinese, French, Spanish and German.

MailSite Express is part of Rockliffe MailSite 4.5. Rockliffe MailSite 4.5 prices begin at \$995 for up to 500 users.
