ROCKLIFFE[®] ANNOUNCES IMMEDIATE AVAILABILITY OF MAILSITE POCKET[®] FOR WIRELESS DEVICES

**New MailSite Pocket now offers wireless access to e-mail hosted on
Rockliffe MailSite messaging platforms**

San Jose, Ca, October 10, 2000 --- Rockliffe, a leading developer of scalable messaging infrastructure software for Windows NT/2000, today announced that it is now shipping MailSite Pocket, delivering worldwide access to e-mail through any wireless Internet phone.

"Professionals are becoming more and more mobile. E-mail has become the medium of choice for communication. MailSite Pocket allows professionals to stay in touch via e-mail from anywhere and at any time," said Rockliffe president John Davies. "This new product is designed specifically to meet the growing needs of service providers worldwide, including ASPs, portals, ISPs and wireless carriers."

IDC forecasts that there will be more than 500 million mobile phone subscribers worldwide by 2003, with 160 million of these using wireless devices capable of receiving e-mail and Internet services.

MailSite Pocket is fully integrated with the rest of Rockliffe's family of MailSite products including MailSite DataCenter[®], a carrier-grade e-mail solution designed to scale effortlessly from hundreds of thousands to millions of users per cluster, and MailSite Express[®], a fast and easily-to-brand web-based e-mail client.

MailSite Pocket adds to Rockliffe's reputation as the leading provider of Windows-based Internet messaging platforms. Based on WAP, the global Internet standard for accessing Internet services using wireless devices such as mobile phones, MailSite Pocket ensures that e-mail providers hosting with Rockliffe MailSite can offer the highest value services to their clients and users.

UK-based Britain.net tested MailSite Pocket to help differentiate their messaging service from other free web-based mail systems and is pleased with the results. Adrian Cooper, Managing Director of Britain.net said, "MailSite Pocket allows instant access to e-mail and lets users avoid being backlogged with messages while traveling. It's great to be able to offer e-mail that users can access from any web browser, but being able to access e-mail from a mobile phone is definitely an extra bonus that adds tremendous value to the services we provide."

From the company's inception, Rockliffe has been committed to leading the market in Internet messaging infrastructure software designed specifically for Windows NT/2000. Rockliffe's flagship product, MailSite, is designed to be easy to administer and can quickly accommodate additional users with minimal investment in hardware, software, personnel and premises. Rockliffe MailSite's unique scalability provides an affordable long-term e-mail solution for companies and organizations of all shapes and sizes, from the smallest partnership to the largest service provider. MailSite Express web e-mail is now available in seventeen additional languages, including Chinese, French, Spanish and Indonesian.

MailSite Pocket is bundled with Rockliffe MailSite version 4.5. Rockliffe MailSite prices begin at \$995 for up to 500 users.
