ROCKLIFFE INTERNET E-MAIL SOFTWARE DEVELOPER OPENS EUROPEAN SALES AND MARKETING OFFICE TO SUPPORT GROWING INTERNATIONAL DEMAND

Scalable NT Messaging Platform For Large Deployments Attracts ISPs And Internet Outsourcers

SANTA CLARA, CA – November 19th, 1999 – Rockliffe, Inc., a leading developer of scalable e-mail server software, today announced the opening of its new Sales and Marketing offices in the United Kingdom. The European headquarters will provide the complete family of MailSite Internet e-mail software products to European corporations that deliver messaging services on a Windows NT platform.

“Our European HQ will take us one step closer to meeting the increasing global demand for mission critical messaging solutions on Windows NT,” said Rockliffe President John Davies. Mr. Davies went on to state that MailSite is extremely well suited for large European corporations and ISPs. “Rockliffe MailSite has been well received by European customers like Deutsche Telecom in Germany, the University of Wales in the United Kingdom, and Tele2France in France. In fact, about half of our business comes from outside the US. By establishing an office in Europe, we will be able to better serve these customers and further expand our market,” said Davies.

Rockliffe MailSite has enabled many customers to greatly reduce the cost of setting up and maintaining their e-mail services by migrating from UNIX to NT whilst continuing to meet their scalability and reliability needs. “We have some customers running over half a million mailboxes on one NT server and we expect to reach the million users per server mark soon” said Davies. “MailSite’s scalability has enabled our customers to radically reduce the cost of ownership as well as reducing support, training and hardware overheads, whilst at the same time ensuring that they continue to beat their competitors on service”.

Because of its reliable performance in high volume deployments, Rockliffe MailSite is frequently selected by ISPs (Internet Service Providers) and by ASPs (Application Service Providers). ISPs using Rockliffe MailSite can cost-effectively serve more users. ASPs can offer Rockliffe MailSite’s LDAP3 integrated user database, IMAP message store, delegated web administration, list server and advanced SPAM prevention features to multiple organizations.

An important factor for all Rockliffe customers continues to be MailSite's favorable pricing structure, which significantly lowers the cost of ownership. Rockliffe MailSite costs just U.S. \$495 for 100 users. Prices start at \$1,995 for unlimited users. A fully functional evaluation copy of MailSite can be downloaded free from Rockliffe's website.

Rockliffe's International office is located at 1a Tower Square, 33 Wellington Street, Leeds, LS1 4HZ in the United Kingdom. The telephone number is +44 (0)113 209 5544. The fax number is +44 (0)113 209 5629. For more information or to order Rockliffe MailSite and other Rockliffe Rock Solid Software, visit the Rockliffe website today at <http://www.rockliffe.com>.
