**ROCKLIFFE® ANNOUNCES MAILSITE POCKET® FOR WAP
ENABLED MOBILE DEVICES**

**New MailSite Pocket now offers easy access to email hosted on Rockliffe
MailSite messaging platforms**

San Jose, Ca, May 23, 2000 --- Rockliffe, a leading developer of scalable messaging infrastructure software for Windows NT/2000, today announced the beta availability of MailSite Pocket, delivering worldwide e-mail access through any Wireless Access Protocol (WAP) enabled mobile phone. "MailSite Pocket utilizes WAP Technology to access e-mail via IMAP. It allows users to read and delete messages from the Inbox and move messages to other folders," said Rockliffe president John Davies. "This new product is designed specifically to meet the growing needs of service providers worldwide including ASPs, wireless carriers and unified messaging providers." Rockliffe will perform a beta demonstration of MailSite Pocket this month in Orlando, FL, during ISPCON, one of the largest conventions focused on the business of providing Internet services.

MailSite Pocket is fully integrated with the rest of Rockliffe's family of MailSite products including MailSite DataCenter®, a carrier-grade e-mail solution designed to scale effortlessly from hundreds of thousands to millions of users per cluster, and MailSite Express®, a fast, easily brandable web-based e-mail client.

MailSite Pocket adds to Rockliffe's reputation as the leading provider of Windows-based Internet messaging platforms. Based on WAP, the global Internet standard for accessing Internet services using wireless devices such as mobile telephones, MailSite Pocket

ensures that e-mail providers hosting with Rockliffe MailSite can offer the highest value services to their clients and users.

UK-based Britain.net is testing MailSite Pocket to help differentiate their messaging service from other free web-based mail systems and is pleased with the results. Adrian Cooper, Managing Director of Britain.net said, "MailSite Pocket allows instant access to e-mail and lets users avoid being backlogged with messages while traveling. It's great to be able to offer e-mail that users can access from any web browser, but being able to access e-mail from a mobile phone is definitely an extra bonus that adds tremendous value to the services we provide."

From the company's inception, Rockliffe has been committed to leading the market in Internet messaging infrastructure software designed specifically for Windows NT/2000. Rockliffe's flagship product, MailSite, is designed to be easy to administer and can quickly accommodate additional users with minimal investment in hardware, software, personnel and premises. Rockliffe MailSite's unique scalability provides an affordable long-term e-mail solution for companies and organizations of all shapes and sizes, from the smallest partnership to the largest service provider. MailSite Express web e-mail is now available in eleven additional languages, including Chinese, French, Spanish and Indonesian.

MailSite Pocket will be available August 2000 from Rockliffe.

MailSite Pocket is part of the Rockliffe MailSite suite of e-mail solutions for Windows NT/2000. Rockliffe MailSite prices begin at \$995 for up to 500 users.
