Rockliffe Reaches The Ends Of The Earth

Messaging and e-mail software developer Rockliffe is proving that its solutions can reach the farthest flung corners of the globe.

Campbell, CA – September 4, 2001- Rockliffe, Inc., a leading developer of messaging infrastructure software for service providers today announced that the Australian Antarctic Division (AAD) is using Rockliffe MailSite to provide its staff with Internet e-mail. AAD is using MailSite to send and receive messages between research stations in the Antarctic and its head office in Tasmania.

“E-mail is vital for the AAD not only to send information back from their research stations in the Antarctic but also for staff to stay in close touch with their families during the long dark nights. They needed a solution that they could depend on,” said John Davies, President of Rockliffe. “We’ve always said that one of the main benefits of Rockliffe’s MailSite is its rock solid reliability. This is definitely one of the more extreme examples.”

The AAD is based in Hobart, Tasmania and is part of the Australian government’s Department of the Environment and Heritage. The AAD is responsible for administering Australia’s activity in the Antarctic and subantarctic regions. It conducts scientific research programmes both on land and in the ocean as well as maintaining a presence in Australian Antarctic and subantarctic territories managing the four permanent Australian research stations.

Rockliffe MailSite is secure e-mail server software that can be used to provide e-mail solutions for organisations ranging from small companies and workgroups up to the largest ISP and telecommunication company. Rockliffe’s MailSite enables organisations to offer e-mail access from anywhere in the world via either a web-based interface or a mobile WAP-based interface. MailSite can be used as a list server to manage e-mail mailing lists and electronic newsletters. MailSite can be downloaded for a 30 day free trial from Rockliffe’s website. Prices start at \$495. For further information please visit www.rockliffe.com.

About Rockliffe

Rockliffe is a leading developer of scalable messaging and e-mail solutions for Internet Service Providers, Application Service Providers and corporations. Rockliffe was established in 1995 and is based in California's Silicon Valley with European headquarters in Leeds, UK. Rockliffe has more than 3,000 thousand customers hosting more than 10 million mailboxes. These include leading ASPs such as Digex, unified messaging providers such as Call Sciences, and large enterprises including Intel, AT&T, Cambridge University, and UK government departments. In April 2001, Rockliffe announced a strategic relationship with Compaq Computer Corporation to jointly develop and market Rockliffe's MailSite for the Compaq NonStop Himalaya platform.
