

FOR IMMEDIATE RELEASE

MAILSITE FUSION NOW FULLY TESTED AND VERIFIED FOR USE WITH IPHONE 3G

MAILSITE FUSION 9 PUSHES EMAIL, CALENDAR AND CONTACTS OVER- THE-AIR WITHOUT ANY ADDITIONAL SOFTWARE ON THE IPHONE

Chicago, IL– HostingCon 2008 – July 30, 2008 – MailSite Software, Inc. announced that it has completed its testing and verification of MailSite Fusion 9 with Apple's new iPhone 3G. MailSite has also tested and verified the original iPhone with the 2.0 firmware installed and the iPod Touch with the 2.0 firmware installed. MailSite Fusion 9 now pushes email, calendar and contact updates over-the-air to the iPhone without requiring any software to be installed on the device. MailSite Fusion 9 does this with its built-in ActiveSync server. Visit us in booth 229 at HostingCon to learn more.

With this verification, MailSite Fusion 9 now pushes email, calendar and contacts over-the-air to most major smartphones in the market today. This includes the iPhone, Nokia E and N series, Microsoft's Windows Mobile devices and other smartphones that are compatible with Microsoft Exchange 2007 ActiveSync.

MailSite Fusion 9 continues to provide excellent integration with Microsoft Outlook 2007 for email, calendar and contacts without requiring any plug-ins. Unlike Apple's MobileMe, MailSite Fusion 9 provides true end-to-end two-way push synchronization of email, calendar and contacts from Outlook to MailSite to iPhone.

For small businesses, MailSite Fusion SE 9 runs on low-cost 32 bit servers and includes everything required for a messaging platform. MailSite Fusion SE 9 does not require a dedicated server and can be administered by a Windows administrator. With licensing prices less than 50% of Microsoft Exchange 2007, small businesses now have a low-cost alternative.

For service providers, MailSite Fusion SP 9 is field-proven to scale to over a million subscribers on a single cluster. This offers carriers and hosting companies a low cost and brand-able messaging platform with the opportunity for profit margins that are substantially higher than with Hosted Exchange 2007.

"Adoption of mobile push email, calendar and contacts is just beginning to take-off," said David Ferris of Ferris Research. "The new Apple iPhone 3G will take ActiveSync beyond the large enterprise to the mass market and MailSite is perfectly positioned to take advantage of this opportunity."

"The new ActiveSync server in MailSite Fusion 9 just works," said Jaime Bolanos, IT Manager of Associated Foreign Exchange, a MailSite customer in Encino, California. "By configuring your smartphone with your server name, user name and password, MailSite Fusion works just like an Exchange 2007 server."

“We are really excited to be able to provide the native integration with Apple’s new iPhone,” said John Davies, President and CEO. “With the scalability and reliability of MailSite Fusion 9, now hosting companies and enterprises can roll out first class support for just about every smartphone in the market.”

MailSite Fusion 9 is available from MailSite Software, Inc. and from resellers around the world. MailSite Fusion SE 9 starts at \$495 per year for 20 users. Anti-spam and anti-virus subscriptions will be available at additional cost. For more information visit: <http://www.mailsite.com>.
