Hotchilli Internet Solutions upgrades e-mail server to offer customers improved web and WAP-based e-mail

Hotchilli Internet Solutions has upgraded its e-mail server software to provide its customers with improved web and WAP-based e-mail. The new Rockliffe MailSite Enterprise software also provides spam, virus and porn filtering and enables Hotchilli to comply with the requirements of the new RIP legislation.

The MailSite messaging and e-mail software has been installed on Hotchilli's servers housed at Telehouse Europe. Independent tests (www.webperf.net) consistently rate Hotchilli as one of the UK's top ten most reliable Internet Service Providers.

Secure e-mail for barristers

Tony Turner, technical director of Hotchilli (www.hotchilli.com) said: "We've been running with Rockliffe MailSite for about a year now but business expansion meant that we needed to upgrade. We looked at several options but decided to stick with MailSite because we needed its reliability, which is crucial to our customers such as QC Mailbox who provide a global secure e-mail service for barristers. Rockliffe's customer service also played a key part in this decision. In this industry it's unusual to be able to pick up the phone and speak to people who know the right answers as and when we need them."

MailSite Enterprise is designed for large organisations and medium and large sized ISPs. This single server solution can scale to well over fifty thousand mailboxes and mail lists in multiple domains. Mailboxes can be authenticated against the NT user database, against the registry or against any ODBC database. Mail list membership can be stored in the registry, in text files and in any ODBC database. Each mail list can grow to over half a million members.

MORE...

Rockliffe MailSite can be downloaded for 30 days free trial from www.rockliffe.com and prices start at \$495 for up to 50 users.

“MailSite has been developed specifically for Microsoft Windows NT/2000 to provide reliable performance in high volume deployments and as a result is very popular with ISPs and ASPs that need to provide a reliable level of service to their customers. Some of our customers are running over half a million mailboxes on a single NT server,” explained Alun Davies, European director of Rockliffe.

About Hotchilli

Hotchilli is a leading UK ISP providing thousands of businesses with scalable web and e-mail hosting solutions. Its clients include the Ford Motor Company, QC Mailbox (global secure e-mail service for barristers), Essex Health Authority and Just35.com. Hotchilli's internet services include Windows NT/2000 web and email hosting, mobile internet technology (WAP services), dedicated servers, secure hosting and e-commerce solutions.

About Rockliffe

Rockliffe is a leading developer of scalable messaging and e-mail solutions for Internet Service Providers, Application Service Providers, and corporates. Rockliffe is based in San Jose, Silicon Valley, California and was established in 1995. Its international headquarters are in Leeds, UK. Rockliffe has several thousand customers hosting more than 10 million mailboxes. These include leading ISPs such as Digex, unified messaging providers such as VocalLink and large corporations including BT, Boeing, Cambridge University and UK government departments.

For further information please contact Rockliffe's European headquarters on 0113 209 5544 or visit www.rockliffe.com.
