

MailSite[®] Anti-Spam

MailSite Anti-Spam is a layered spam protection solution that integrates blacklists, whitelists, Greylisting and reputation scoring with an advanced spam analysis and scoring engine to deliver comprehensive protection for email users from spam and phishing messages

WHAT IS IT?

MailSite Anti-Spam is a layered spam protection solution that integrates blacklists, whitelists, Greylisting and reputation scoring with an advanced spam analysis and scoring engine to deliver comprehensive protection for email users from spam and phishing messages.

HOW IS IT DIFFERENT TO EXCHANGE ANTI-SPAM?

MailSite Anti-Spam software is packaged with every version of MailSite Fusion and does not require a separate installation. MailSite Anti-Spam is administered through the standard MailSite Administration Console and does not use a separate administration interface.

HOW MUCH DOES IT COST?

MailSite Anti-Spam subscription is licensed per mailbox on an annual basis. The cost per mailbox depends on the quantity purchased. To get a price quote please contact your MailSite sales representative.

HOW ARE UPDATES HANDLED?

MailSite Anti-Spam automatically updates the spam rules every 5 minutes without interruption in service or administrator intervention. Furthermore MailSite Anti-Spam updates new versions of the scanning engine directly also without interruption in service or administrator intervention. This means that your users will always be protected with the latest signatures and technology without you having to worry about anything.

WHAT'S NEW?

MailSite Anti-Spam now incorporates real time domain and IP reputation scoring to dynamically adapt to new sources of Spam as they appear. This feature works in conjunction with the spam content scanning engine to provide powerful and comprehensive protection against spam and phishing.
